2022-2026-CSE-B

Aim:

Write a Java program that uses three threads to perform the below actions:

- 1. First thread should print "Good morning" for every 1 second for 2 times
- 2. Second thread should print "Hello" for every 1 seconds for 2 times
- 3. Third thread should print "Welcome" for every 3 seconds for 1 times

Write appropriate **constructor** in the Printer class which implements Runnable interface to take three arguments: **message**, **delay** and **count** of types **String**, **int** and **int** respectively.

Write code in the Printer.run() method to print the **message** with appropriate **delay** and for number of times mentioned in **count**.

Write a class called ThreadDemo with the main() method which instantiates and executes three instances of the above mentioned Printer class as threads to produce the desired output.

[Note: If you want to sleep for 2 seconds you should call Thread.sleep(2000); as the Thread.sleep(...) method takes milliseconds as argument.]

Note: Please don't change the package name.

Source Code:

q11349/ThreadDemo.java

```
package q11349;
public class ThreadDemo {
   public static void main(String[] args) throws Exception {
      Thread t1 = new Thread(new Printer("Good morning", 1, 2));
      Thread t2 = new Thread(new Printer("Hello", 1, 2));
      Thread t3 = new Thread(new Printer("Welcome", 3, 1));
      t1.start();
      t2.start();
      t3.start();
      t1.join();
      t2.join();
      t3.join();
      System.out.println("All the three threads t1, t2 and t3 have completed executio
n.");
    }
}
class Printer implements Runnable {
   private String message;
   private int delay, count;
   public Printer(String message,int delay,int count){
      this.message=message;
      this.delay=delay;
      this.count=count;
   }
   public void run(){
      for(int i=0;i<count;i++){</pre>
         System.out.println(message);
```

} }

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Good morning
Hello
Welcome
Good morning
Hello
All the three threads t1, t2 and t3 have completed execution.
